

Micro Assignment

Personal Data 2

Create a program that stores and reads out personal data using arrays. The arrays could for example be called *names*, *ages* and *heights*.

- Create three arrays of different types but with same length.
- Write data to the arrays.
- In a single for loop, print out the data formatted nicely.

```
Lars is 24 years old and 187,5 cm tall.  
Bodil is 27 years old and 167,0 cm tall.  
Mikkel is 32 years old and 193,0 cm tall.
```
