Micro Assignment

Underline

Create a program that prints out a text, underlining a specific character.

Hints:
- Create a constant String named *inputText* and assign some text to it.
- Create a String named *linesText* and assign an empty text.
- Loop through the characters in the String, reading them using the *charAt* method.
- Compare the character to a specific one, and add a space or a line to *linesText* depending on the result.
- Lastly print out the two strings.

```
Many, many years ago lived an emperor
 _    _    _    _         _
```
